

WHAT IS CLAIMED IS:

1. A light guide panel with one or more slanted light guiding parts comprising:

5 a light guide panel including a light radiating part on its front side to radiate the light emitted from a light source; and

a slanted light guiding part provided between the light source and one side end of the light guide panel, wherein the slanted light guiding part forms a slope to the extent that its one end adjacent to the light source is thicker than the other end adjacent
10 to the light radiating part.

2. The light guide panel as claimed in claim 1, wherein the slope of the light guiding part is below the critical angle according to the index of refraction of each medium.

15

3. The light guide panel as claimed in claim 1, wherein the light guiding part is formed to be the combination of straight lines, oblique lines and curved lines.

4. The light guide panel as claimed in claim 1, wherein the light guiding part is
20 separately formed from the light radiating part.

5. The light guide panel as claimed in claim 1 wherein the light guiding part and the light radiating part are made from different materials.

6. The light guide panel as claimed in claim 1 wherein the light guiding part is provided with a recessed fitting part at one end to facilitate the connection with the light radiating part.

5 7. The light guide panel as claimed in claim 3, wherein the light guiding part and the light radiating part are made from different materials.
